

Secure email and file transfer

Your employees use cloud services like WeTransfer to send large or sensitive files. They often do not realize that these files are sent into the cloud unsecured. In many cases this can be a threat to your organization especially when you have to be compliant to the GDPR. The same applies to your email messages. Make sure that your privacy sensitive data is not intercepted or falls into the wrong hands.

Starting today, use FileCap to send large and sensitive files and email messages safely and 'cloudless'!

Use the FileCap Outlook add-in

- Send your emails as usual, but now with attachments of **10 GB** or more
- No longer a full mailbox because of large attachments
- Invite people outside your organization to safely send files to **you**
- Send and receive your **email messages fully encrypted**

Discover the user friendly FileCap portal

- By using the FileCap portal people outside your organization can send large files **to you**
- Use a password for extra security
- Two-factor authentication through SMS
- Send and receive your email messages **fully encrypted**

FileCap: maximum security and optimal usability, all in one.

By using FileCap you can rest assured that your files and email messages are only available to the intended recipients. FileCap uses advanced encryption techniques for sending and receiving your files and your email messages (subject as well as the full body text). The files that you send are encrypted and stored on your own FileCap sever, within your own secured network. The email conversation will be kept in a secure portal on the same FileCap server.

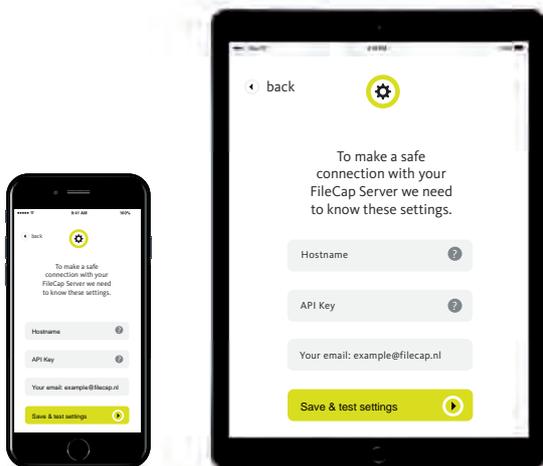

More possibilities, the same ease of use.

FileCap is continuously developing new features. For this, the input of our customers is essential. Does your staff use iOS devices for work purposes on a regular basis? The new FileCap app and Mac client provide the most important FileCap features for iPhone/iPad and Mac users. Furthermore, FileCap developed an add-in for Sharepoint and a Windows plug-in.

FileCap is available in Dutch - English - German - Swedish - Spanish - Italian - French - Finnish

Windows plug-in

- Send large files directly from Windows Explorer!
- Invite customers and suppliers from Windows to send u files
- No email client required

Now also for Apple: the FileCap app and Mac client

- Send large files directly from your iPhone/iPad or Mac
- Invite externals to send u large files safely
- Suitable for iOS 7 or higher.
